

Abstract

Instrument panel for a motor vehicle

5 In an instrument panel (18) for a motor vehicle having a
carrier (19), electrical leads (24) are stretched between contact
pins (22, 23) of an electronic component (21) and/or a plug part
(20). The contact pins (22, 23) are pressed into the carrier (19).
This makes mounting the electrical leads (24) on the instrument
10 panel (18) particularly easy.
